# QiiQ REMOTE INSPECTION APP

HOW IT WORKS:

Global manufacturing and general economic activity has slowed down but has not completely stopped. Numerous sites are still functional, on all continents. However, travel and access restrictions are preventing QA/QC activities to take place smoothly. SGS has the long established technological means for our inspectors to conduct remote inspection – they will guide the supplier's representative through the inspection points and record information along the way using QIIQ, our remote inspection app.

CONNECTING PEOPLE, SKILLS & TECHNOLOGY, USING ANY DEVICE. ANYWHERE.

PRIOR TO INSPECTION DAY:

SUBMIT REQUEST FOR INSPECTION
Customer submits request for a QiiQ inspection at a specific supplier site.

TRAINING
SGS trains the relevant participants and provides the QiiQ accounts (download from the App Store / Play Store).

IMAGE AND VIDEO STREAM
Customer advises supplier that pictures and videos of their facilities will be streamed to SGS and to customer.

ON INSPECTION DAY:

INITIAL CALL
The SGS inspector invites the supplier's representative and initiates the call.

EQUIPMENT AND POWER
The supplier's representative only need devices and power connection.

INTERACTIVE INSPECTION
The call proceeds, with the SGS inspector guiding the supplier's representative through the inspection points using the QiiQ functionalities.

FINAL AUDIT AND COLLABORATION
The SGS Inspector leads the inspection, records and maintains data, helps troubleshoot issues.
