PROTECTING DIGITAL AND PRINTED DOCUMENTS:
CONCERNS ABOUT INFORMATION SECURITY

SGS

Organizations should be concerned about their digital and printed information security. A third of printed security losses are done be internal users and more than half of companies have lost printed data information. This often comes down to companies believing they wouldn't be highly impacted from a data breach so do not implement security protections or train their staff. Threats against data include someone asking for information or lying to gain access as well as improper document removal, all of which can be combatted with training and regular auditing. Consistent monitoring threats online and in person can prevent major data loss.

72%
of companies are concerned about printed data breaches, but only 24% are confident they are completely protected

28%
of businesses never train staff on data protections strategies and more than half don't think print data loss would have a serious impact

33%
One third of businesses do not have a secure information destruction process

50%
do not have a secure method for destroying documents, such as secure document shredding

1,000,000,000+
records have been compromised in last decade, costing businesses almost $50 billion dollars

SOLUTIONS

Providing assurance over information security is critical to optimizing the value of organizational information as well as preventing the costly consequences of breaches. SGS offers certification for ISO 27001, 27701 and Europrivacy GDPR Certification.

ISO 27001 Information technology

details requirements for establishing, implementing, maintaining and continually improving an information security management system (ISMS)

ISO 27701 Security techniques

provides guidance for establishing, implementing, maintaining and continually improving a Privacy Information Management System (PIMS)

Europrivacy GDPR

delivers gap analysis and certification of compliance
