Philosophy

Dr. Maria Montessori (1870-1952) was an Italian physician and anthropologist who devoted her life to understanding how children develop socially, intellectually, physically, and spiritually. By carefully observing children all over the world, she discovered universal patterns of development which are found in all children regardless of their culture or the era in which they live.

The foundation of the Montessori pedagogy is that the child is born with all the keys to success. The role of the adult is to create an environment that allows the child to express his or her natural willingness to learn and thus acquire skills.

- Active learning
- Child's natural rhythm
- Specific equipment in an adapted environment

Attitude

Autonomy

Learning

Freedom of choice

Respect

Kindness

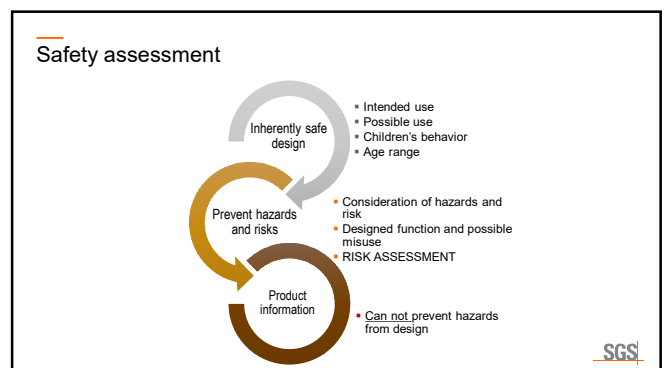

Environment

Presentation of a concept

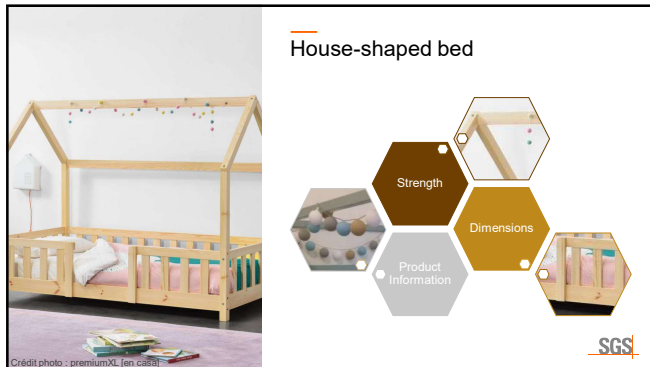

- ❖ Prepare the environment and adult's attitude to foster child's freedom of choice and self-learning
- ❖ Emergence of new products intended to help create a suitable environment
- ❖ Adapted environment : objects adapted to the size of a child
- ❖ Controlled freedom, allow free exploration in a **secured environment**
- ❖ Use of wood « The **wood** is a warm, "living", fragrant, durable, aesthetic material, and will therefore be much more "nutritious" and pleasant for the child than plastic »
